Allowable Subject Matter

4. Claims 1, 3-11, 13-21, and 23-30 are allowed.

Reason For Indicating Allowable Subject Matter

5. Claims 1, 11, and 21 identify the distinct feature, "storing layer rule definition data, layer structure definition data, database data, input data, layer structure information and layer rule for a multidimensional database, wherein the layer rule includes rules for character-row converting a name of a member and for generating layer information, maintaining the layer rule based upon the layer rule definition data, maintaining the layer structure information based upon the layer structure definition data, inputting the input data in the database data, generating layer information for the input data based upon the layer rule, the input data and the layer structure information, registering the layer information at the layer structure information, and entering the input data in the multidimensional database based upon the layer structure information" are not taught or suggested by the prior art made of record. The closest prior art, Ohata et al. (U. S. Patent No. 5,864,857) disclosing storing and retrieving multidimensional data, fails to suggest the claimed limitation as mentioned above in combination with other claimed elements. The above feature in conjunction with all other limitations of the dependent and independent claims 1, 3-11, 13-21, and 23-30 are hereby allowed.
